LOCATION
Rabat, Morocco

LANGUAGES

- Arabic — Native
- French — Fluent
- English — Fluent
- Spanish — Intermediate

CORE SKILLS

PROGRAMMING

Python · C / C++ · Java · JavaScript · SQL · Bash

AI / DATA

PyTorch · TensorFlow · OpenCV · Scikit-learn · Pandas · NumPy

BACKEND / INFRA

FastAPI · Docker · Git · Linux · Node.js

BIG DATA

Spark · Hadoop · Hive · Kafka

BI / ETL

Power BI · Talend (TOS BD)

AUTOMATION

n8n · PostgreSQL · FFmpeg · WordPress

INTERESTS

Rotaract Member · Open Source Contributions · Linux Ricing · Android / Custom ROMs

Mohamed Nacir

5th-year Computer Engineering student specialising in AI, Big Data

EDUCATION

Engineering Degree — Génie Informatique

2022–2027

International University of Rabat (UIR)
AI & Big Data Engineering

PROFESSIONAL EXPERIENCE

AI & Automation Engineering Intern

TekAfrica • 2026

Rabat, Morocco • 2-month internship

- Designed and deployed a modular technology-watch and content automation pipeline covering RSS collection, AI scoring, content generation, video production and WordPress publication.
- Built the pipeline with Python, PostgreSQL, FastAPI, n8n and Docker; integrated Gemini, ElevenLabs, Pexels and FFmpeg APIs.
- Implemented an AI scoring engine across freshness, source authority, relevance and trending signals to select the top weekly article from 25 RSS sources.
- Automated SEO-ready article generation and vertical video production, with WordPress drafts and a human review step before publication.
- Extended the pipeline with a six-stage social publishing workflow — script generation, FFmpeg/ElevenLabs media assembly and platform APIs — distributing content to WordPress, Instagram, TikTok and LinkedIn.
- Containerized the stack with Docker and PostgreSQL, resolving environment issues such as port conflicts and volume credential mismatches to keep local deployment stable.

AI Backend Developer Intern

Gamacore • 2025

Rabat, Morocco • 1-month internship

- Designed an EKR (Extended Knowledge Repository) architecture for a production-grade fact-checking API, orchestrating FastAPI, Qwen-Turbo, SerpAPI and Crawl4AI for asynchronous web extraction.
- Built a trustworthiness scoring module combining source credibility and claim-evidence alignment to rate content reliability.
- Developed asynchronous LLM and web-scraping pipelines with concurrent request handling for improved throughput.
- Integrated low-latency Groq inference for near real-time verification, plus PDF preprocessing and text extraction for document-based sources.

Technical Study Intern

Clairvoyance Ingénierie • 2024

Rabat, Morocco • 1-month internship

- Contributed to a cahier des charges (functional specification) for a visitor access-management system, documenting requirements across security, fire safety, network/telecom and building automation.
- Conducted functional analysis of client needs with the Bureau d'Études team, translating operational requirements into technical documentation.
- Produced technical documentation and requirement sheets used to guide system design.

KEY PROJECTS

MT5 Algorithmic Trading Bot — MQL5 Expert Advisor

Developed an automated trading strategy for MetaTrader 5 built around Fair Value Gaps (FVGs) and liquidity-sweep detection, with RSI and moving-average indicators used as confirmation signals before trade entry.

AI Content Moderation Bot — Python, Telegram API, Gemini

Telegram bot combining blacklist filtering with Gemini-based severity classification (Critical→Safe) to auto-flag threats in real time and log every event to a structured JSON audit trail, visualized on a live Chart.js dashboard with severity, keyword and top-offender analytics plus a filterable event log.

Snapchat Memories Recovery Tool — Python, Pillow, FFmpeg

Utility that repairs Snapchat data exports, merging split photo/video and overlay files and restoring each file's true capture date and GPS location by cross-referencing the export's JSON history.

Motion Blur Deconvolution — Python, OpenCV, NumPy, SciPy

Built a blind motion-deblurring pipeline for license-plate images: estimated the blur angle and length directly from the degraded plate via windowed-FFT and cepstrum analysis, then restored it with Wiener deconvolution, validated across a 3×3 parameter sweep with PSNR metrics.
